SUMMARY

BCA student (CGPA: **9.19/10**) with hands-on experience in **coding, debugging, and backend development**. Built and optimized real-time and AI-driven applications using **FastAPI, Flask, and WebRTC**. Focused on writing clean, maintainable code and improving system performance.

TECHNICAL SKILLS

Languages	JavaScript , Python, PHP
Frontend	HTML5, CSS3, Bootstrap, Responsive Design
Backend	FastAPI, Flask, Django, REST APIs, WebRTC, Socket.IO
Databases	MySQL, MongoDB
AI / ML	YOLOv8, Scikit-learn, Pandas, NumPy, Model Fine-tuning
AI APIs	Google Gemini, Vertex AI, Veo3, Prompt Engineering
Tools	Git, GitHub, Vercel, Netlify, Render

PROJECTS

SignVerse — AI-Powered Sign Language Platform GitHub | Demo

Python, Flask, MySQL, WebRTC, Socket.IO, JavaScript, HTML, CSS

- Built REST API backend in Flask handling real-time session state for concurrent users; structured routes following MVC separation
- Set up WebRTC peer connections with Socket.IO as the signaling layer; traced and fixed connection drop bugs under poor network conditions
- Designed MySQL schema for user sessions and detection logs; wrote optimised queries to avoid redundant reads under load
- Structured frontend in reusable HTML/CSS/JS components with consistent error states across all views

AdAura — AI Advertisement Generation Platform GitHub | Demo

Python, FastAPI, Google Gemini API, Vertex AI, Veo3, JavaScript, HTML, CSS

- Built FastAPI backend integrating 3 third-party APIs (Gemini, Vertex AI, Veo3) in a sequential pipeline; each step feeds output into the next
- Designed REST endpoints with full request validation and typed error responses; documented each route for frontend consumption
- Traced a frontend polling bug that caused stale previews; fixed by switching to event-driven response handling, cutting unnecessary requests

FinancePro — Personal Finance Management Application GitHub | Demo

PHP, MySQL, PDO, Bcrypt, Chart.js, JavaScript, HTML, CSS

- Built full-stack expense tracker: PHP backend, MySQL database, and JavaScript frontend with live Chart.js dashboards updating on each transaction
- Wrote SQL queries using PDO prepared statements for all DB operations — prevents injection and keeps queries parameterised
- Implemented auth with Bcrypt hashing and OTP email recovery; deployed on shared hosting with environment-based config separation

EDUCATION

Bachelor of Computer Applications (BCA) 2024 – Present

Institute of Information Technology & Management, Janakpuri, Delhi

Affiliated to GGSIPU CGPA: 9.19 / 10.0

ACHIEVEMENTS

- **Hack With India — Top 40 Finalist** among 1,300+ participants; pitched SafetyGear at **Microsoft, Gurgaon** Aug 2025
- **Matrix 3.0 Tech Carnival — 3rd Position** in Hackathon at IITM Delhi (InternWare) Apr 2026
- **Smart India Hackathon (SIH) — Fine-tuned Mistral LLM (CV + NLP)** Sep 2025
- **CodeSynthesis — Round 2 Qualifier:** Cleared technical screening and product pitch Sep 2025
- **NexVerse 2025 — Presented SignVerse**, at IITM Delhi inter-college fest Sep 2025

CERTIFICATIONS

- **Data Science and Machine Learning using Python — SO Infotech** Jul 2025
